The Approach

How did you select this vendor and what were the deciding factors?

I was looking for a reputed developer community that has global presence and Ahex just seemed to fit the criteria I was looking for in a team. My deciding factor was the founding team and the core team of the company.

Describe the scope of work in detail, including the project steps, key deliverables, and technologies used.

They designed and developed 24marks, a mutual-aid platform that facilitates volunteers and social organisations to make the most impact on-ground. We first started with a discovery call to over the business challenges. Then, they gave us workflows and design mockups to approve before starting production. The final product will allow volunteers across the globe to find tasks posted by social organisations and complete them to earn rewards in exchange for their service.

How many people from the vendor's team worked with you, and what were their positions?

There were over

The Outcome

Can you share any measurable outcomes of the project or general feedback about the deliverables?

We will be able to launch the product within the next few weeks, which is a major achievement for us. The product will allow us to refine our go-to-market strategy and acquire customers in the first 3 months itself.

Describe their project management style, including communication tools and timeliness.

The project management was great, especially compared to other vendors I've previously worked with. They regularly meet deadlines, and I never had unexpected turnovers. We communicated through Skype, Google Meet, and Sheets.

What did you find most impressive or unique about this company?

I had direct access to most of the team, which made it easier to communicate our ideas. Especially, the head of project, who was very analytical and approachable right from the start.

Are there any areas for improvement or something they could have done differently?

None that I can think of. The team is great, and I couldn't have had a better partner for this project.
