Ahex Technologies

Web Dev & Design for Startup

PROJECT DETAILS

🏷 Web Development

📅 Jun. 2016 - Ongoing

💲 $10,000 to $49,999

" *"I'm extremely happy with the price that I'm paying."*

PROJECT SUMMARY

Ahex Technologies is involved in several development projects for potential startup concepts, handling mostly frontend and backend work. One of their projects was to create an Apple Watch app using Objective-C.

PROJECT FEEDBACK

They're an efficient partner that produces top-quality outputs and meets budget estimates spot on. Ahex Technologies' expertise in various development languages and technologies paired with their effective communication despite the time difference has kept the collaboration strong over the years.

The Client

Introduce your business and what you do there.

In the past, I was a co-founder of Siri and sold the company to Apple. I started three other companies including Viv Labs, which was sold to Samsung; Change.org, which is the world's largest petition platform for good; and Sentient Technologies, an AI company.
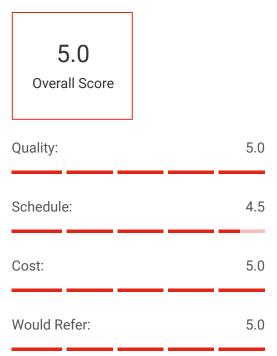

The Challenge

What

I needed someone with frontend and backend web expertise, as well as some graphic design.

The Approach

What was the scope of their involvement?

I've done a few different projects with Ahex. I required help outside of my normal business work and mainly needed frontend web skills with HTML, CSS, and JavaScript. For backend skills, I needed Python and MongoDB. I've also done a smaller project with them that involved building an Apple Watch application using Objective-C.

What is the team composition?

Their co-founder was my main point of contact. There was a second engineer involved as needed.

How did you come to work with

They were recommended by a friend that I used to work with at Siri. He said that whenever he wanted to get a perfect translation from a design to HTML and CSS, he would use Ahex Technologies and that they could do it quickly and cheaply.

How much have you invested with them?

I've spent over $15,000 with them so far.

What is the status of this engagement?

We started working together in June 2016 and the collaboration is ongoing.

The Outcome

What evidence can you share that demonstrates the impact of the engagement?

I've been working on several different projects that are potential startup companies, and though none of them are released yet, I'm

very satisfied with our collaboration. Their communication skills have been excellent and the quality of the software has been strong.

How did Ahex Technologies Pvt. Ltd. perform from a project management standpoint?

They've done a good job. I've asked them for proposals and budget estimates and they've met them pretty accurately. Overall, I've gotten excellent value in terms of quality for cost. We use Skype almost exclusively to communicate.

What did you find most impressive about them?

I've gotten really high-quality web and software engineering capabilities and I'm extremely happy with the price that I'm paying.

Are there any areas they could improve?

They're based in India, so there's a time difference. There are only certain periods of the day when I can communicate with them, but it hasn't been an issue.

Do you have any advice for potential customers?

If you have a web or mobile project and particularly need frontend skills, I strongly recommend them.
